Code 1 (*dichotomie_precision.py*).

```
def dichotomie_precision(a,b,precision):
    while b-a>precision:
        c = (a+b)/2
        if f(a)*f(c) <= 0:
            b = c
        else:
            a = c
    return a,b
```

Code 2 (*dichotomie_precision.py*).

```
def dichotomie_precision(a,b,precision):
    while b-a>precision:
        c = (a+b)/2
        if f(a)*f(c) <= 0:
            b = c
        else:
            a = c
    return a,b
```

Code 3 (*dichotomie_precision.py*).
gfsgh

```
def dichotomie_precision(a,b,precision):
    while b-a>precision:
        c = (a+b)/2
        if f(a)*f(c) <= 0:
            b = c
        else:
            a = c
    return a,b
```
